How many academic years have passed since you last studied prior to attending your current university?

Select one only

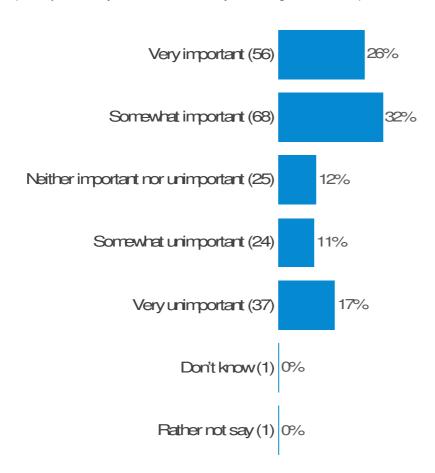

Which option best describes your course or degree? **Select one only**

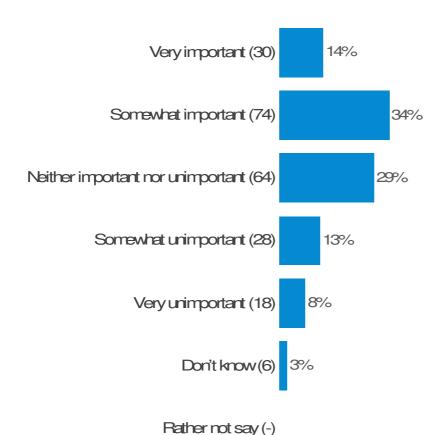

How important were the following when choosing which college or university to apply to? *For each option, select one only*

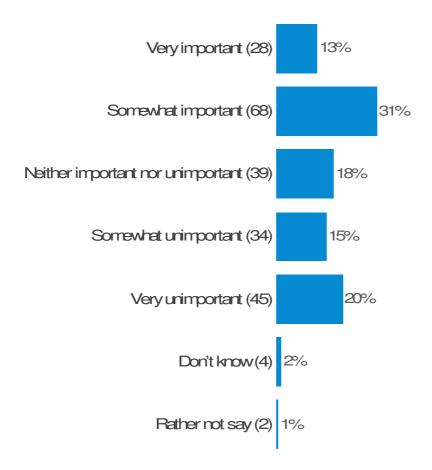

(The proximity of the university / college to home)

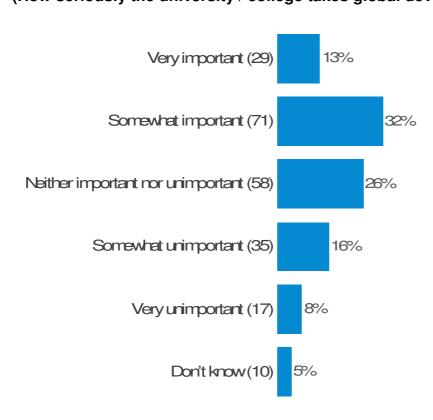

How important were the following when choosing which college or university to apply to? *For each option, select one only* (How seriously the university / college takes environmental issues)

How important were the following when choosing which college or university to apply to? *For each option, select one only* (Nightlife)

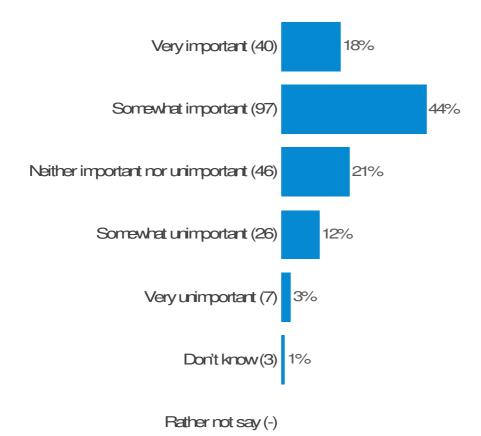

How important were the following when choosing which college or university to apply to? *For each option, select one only* (How seriously the university / college takes global development issues)

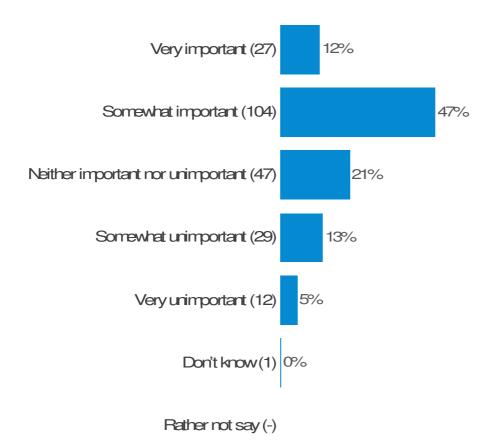

Rather not say (-)

How important were the following when choosing which college or university to apply to? *For each option, select one only* (The position of the course in league tables)

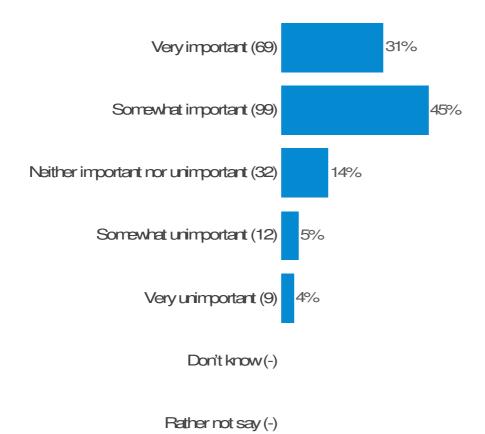

How important were the following when choosing which college or university to apply to? *For each option, select one only*

(The position of the university / college in league tables)

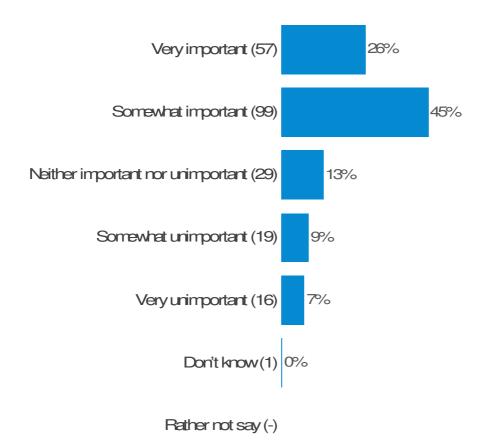

How important were the following when choosing which college or university to apply to? *For each option, select one only* (Attractiveness of location)

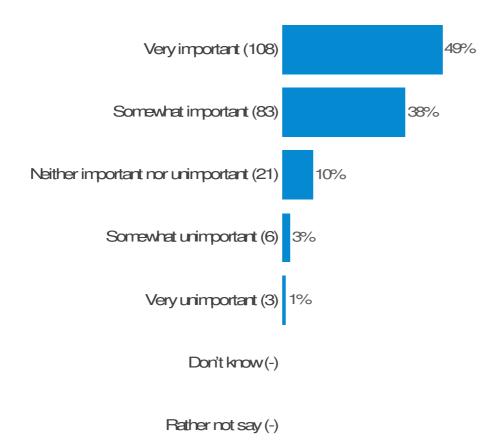

How important were the following when choosing which college or university to apply to? *For each option, select one only*

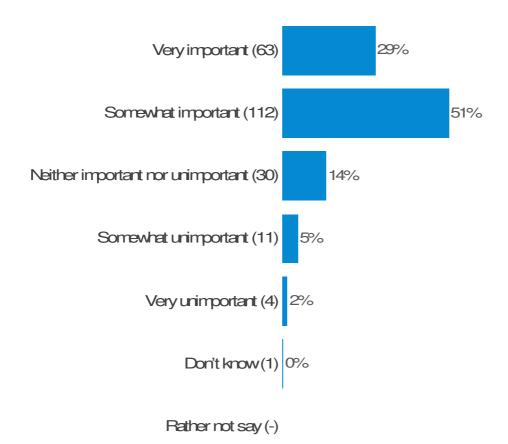

(The 'A' level or equivalent grades or points demanded)

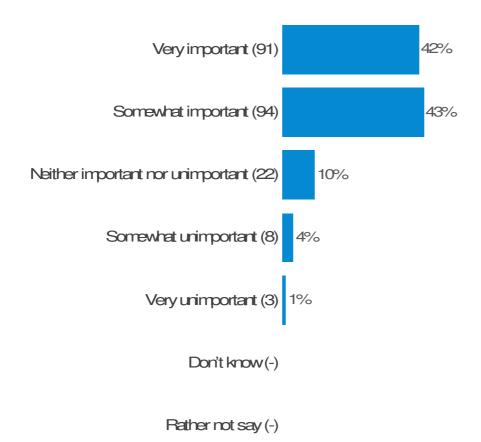

How important were the following when choosing which college or university to apply to? *For each option, select one only* (The teaching methods)

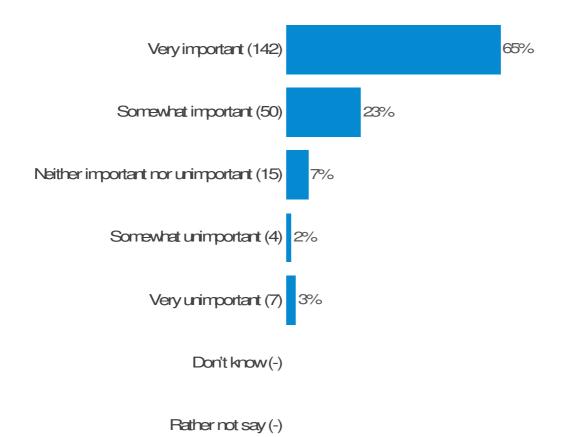

How important were the following when choosing which college or university to apply to? *For each option, select one only* (The reputation of the university / college)

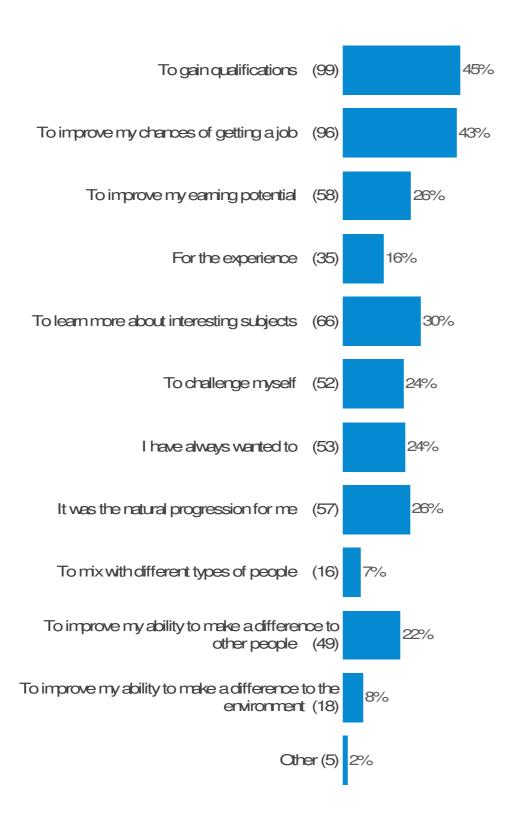

How important were the following when choosing which college or university to apply to? *For each option, select one only* (Reputation of the course)

How important were the following when choosing which college or university to apply to? *For each option, select one only* (Employment prospects after completing the course)

What were the main reasons for taking the course you're currently studying? *Please select your top three reasons only*

If other, please specify

Last second desigion without any regret

I did it at a-level

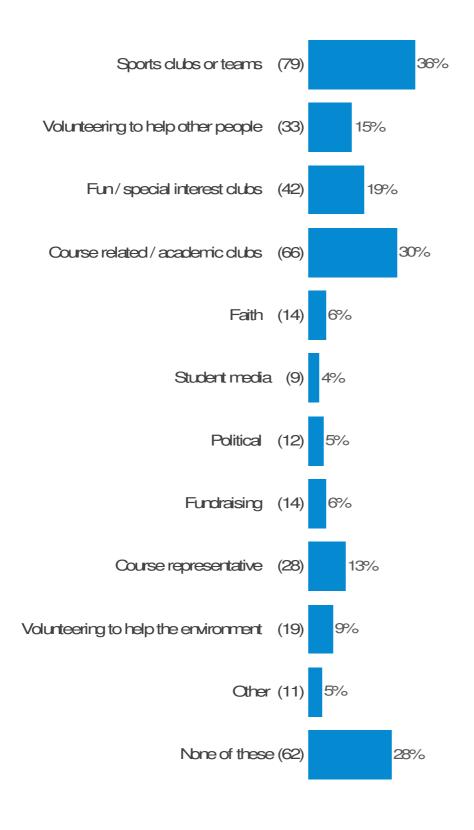

Took the course so I could become qualified in a field I geniuinley enjoyed.

In order to gain professional chartered status

It was the only route to become a qualified nurse

Which, if any, of the following groups, clubs or societies are you part of at your current university / college?

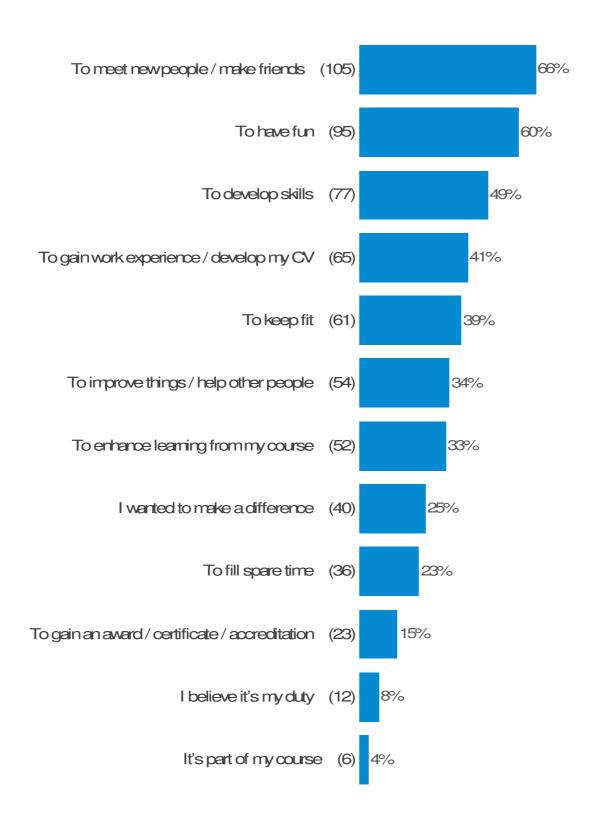

Please select all that apply

Please tell us what other groups, clubs or societies you're part of.

Bar School
Students Rep
SAGUWE part of the Student Scout And Guide Organisation (SSAGO)
paintball
Kickboxing and Muay Thai
Afro Caribbean society
Dance Society, Orchestra and Musical Theatre group who do a musical each year
Peer Assisted Learning
Innovators & Entrepreneurs
LGBT+

What motivated you to take part in these clubs, societies or groups? *Please select all that apply*

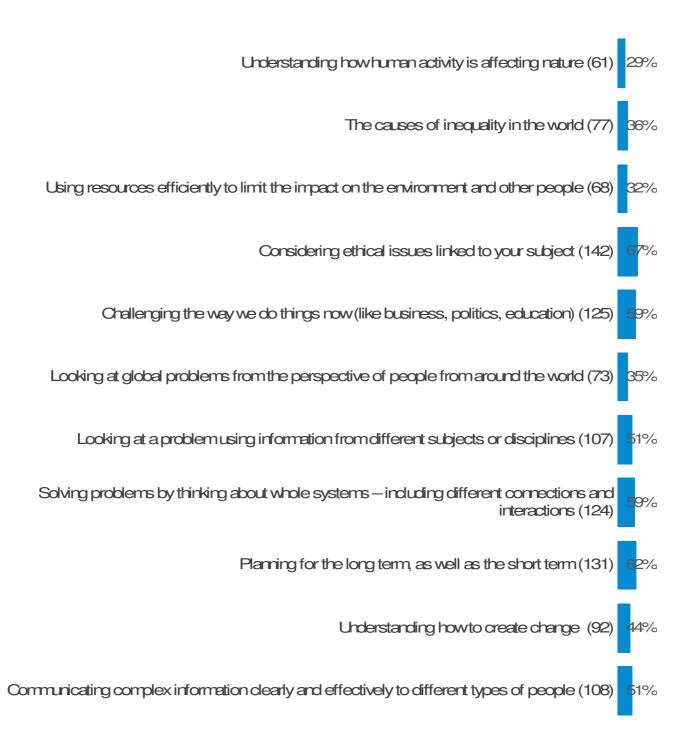

Please tell us why else you got involved.

Because those were the things I've always been passionate about and want to continue to do so To further educate myself in areas I had no prior Inowledge in Support/have fun with my friends

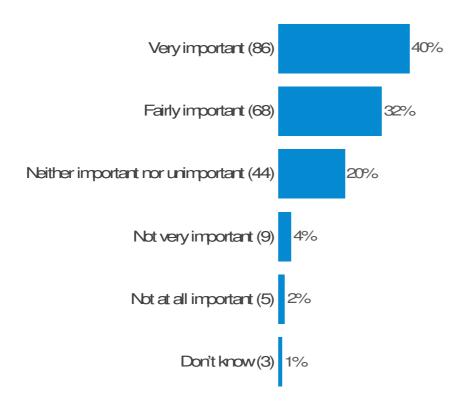

Please read the following list of skills, knowledge and attributes carefully.

Thinking of your time at university / college, have any of the following been covered in the teaching so far?

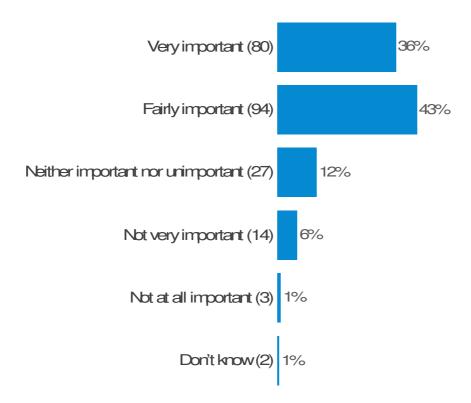

Select all that apply

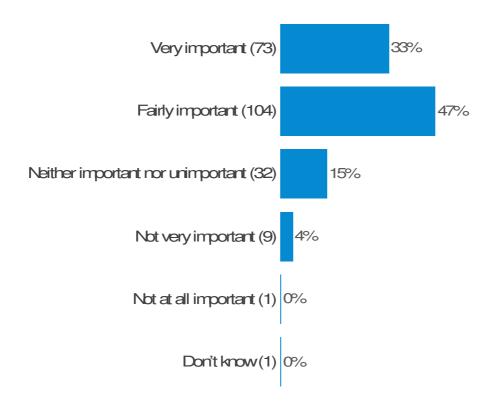

Please select one for each option (Understanding how human activitiy is affecting nature)

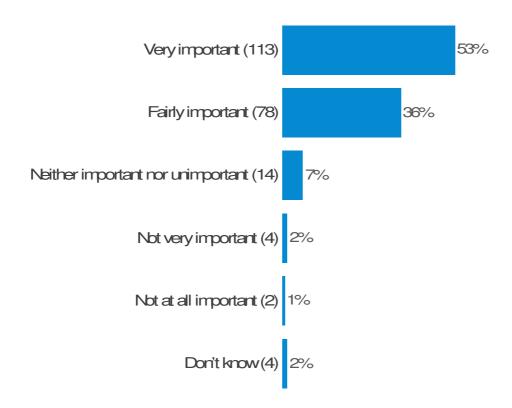

Please select one for each option (The causes of inequality in the world)

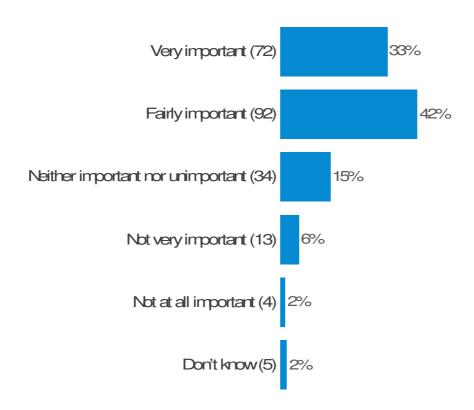

Please select one for each option (Using resources efficiently to limit the impact on the environment and other people)

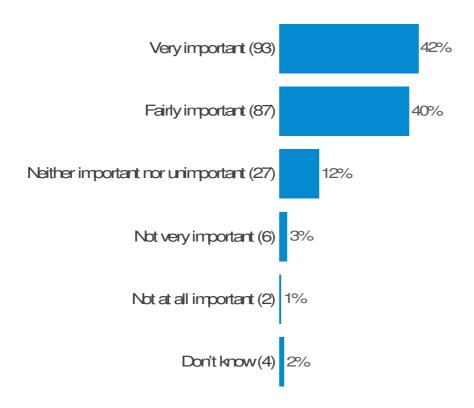

Please select one for each option (Considering ethical issues linked to your subject)

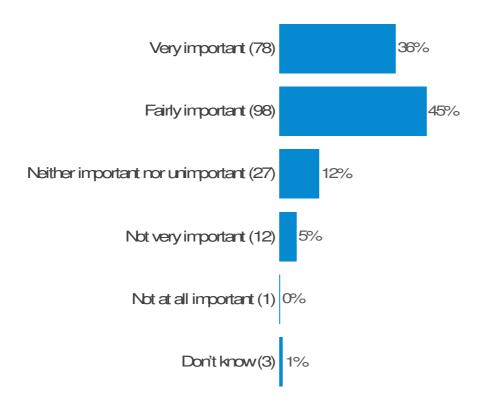

Please select one for each option (Looking at global problems from the perspective of people from around the world)

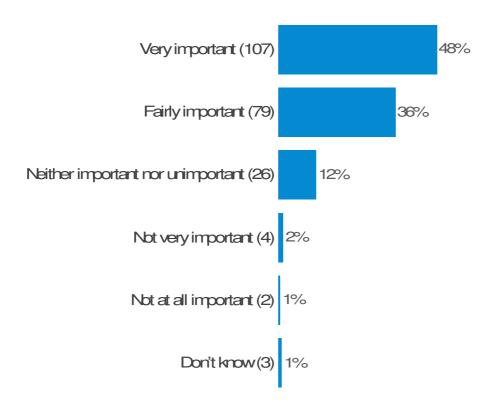

Please select one for each option (Challenging the way we do things now (like business, politics, education))

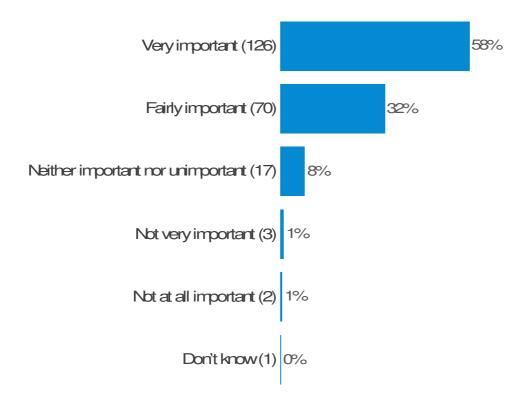

Please select one for each option (Looking at a problem using information from different subjects or disciplines)

Please select one for each option (Solving problems by thinking about whole systems – including different connections and interactions)

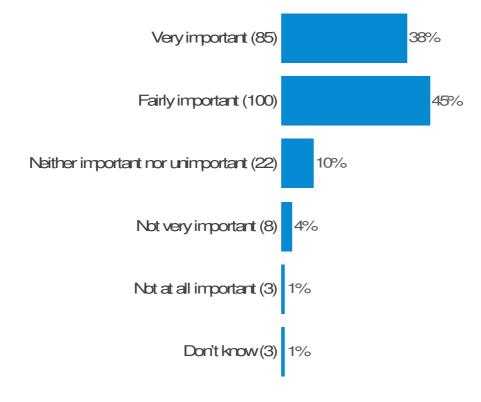

Please select one for each option (Planning for the long term, as well as the short term)

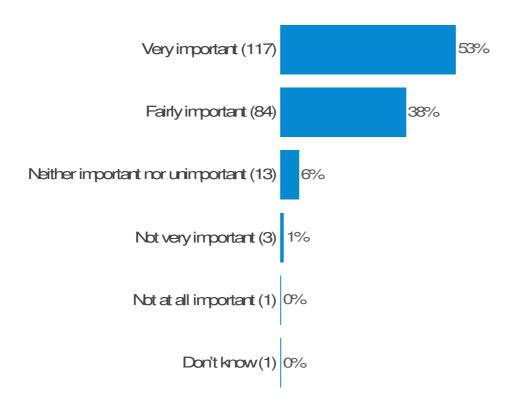

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

Please select one for each option (Understanding how to create change)

Please select one for each option (Communicating complex information clearly and effectively to different types of people)

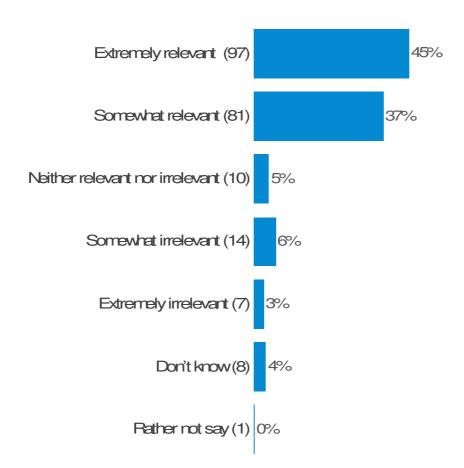

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

Thinking about the skills and knowledge covered in this survey, please select one answer for each option

(Build the material into the existing content in the course)

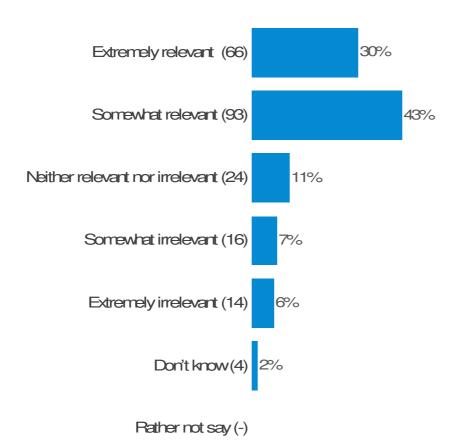

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

Thinking about the skills and knowledge covered in this survey, please select one answer for each option

(Offer a specific module on the course)

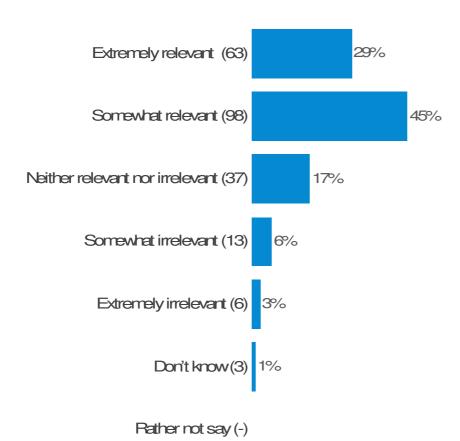

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

Thinking about the skills and knowledge covered in this survey, please select one answer for each option

(Run extra-curricular activities within departments)

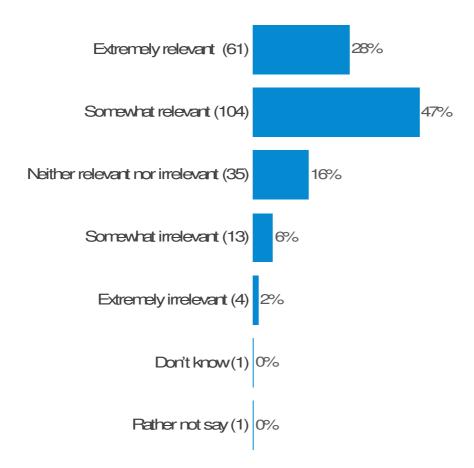

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

Thinking about the skills and knowledge covered in this survey, please select one answer for each option

(Run extra-curricular activities within the students' union)

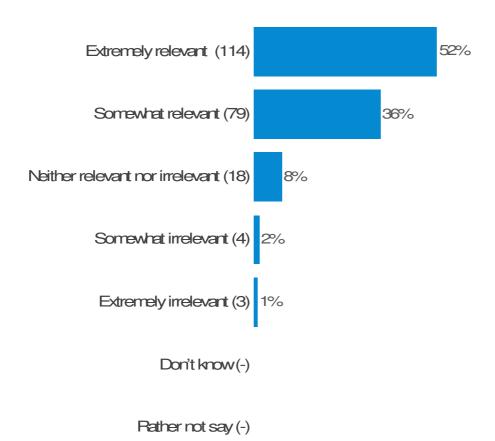

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

Thinking about the skills and knowledge covered in this survey, please select one answer for each option

(Offer placements or work experience)

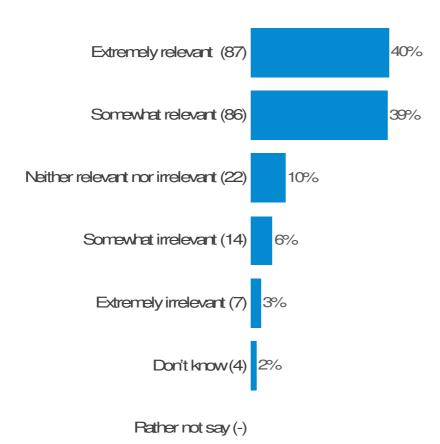

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

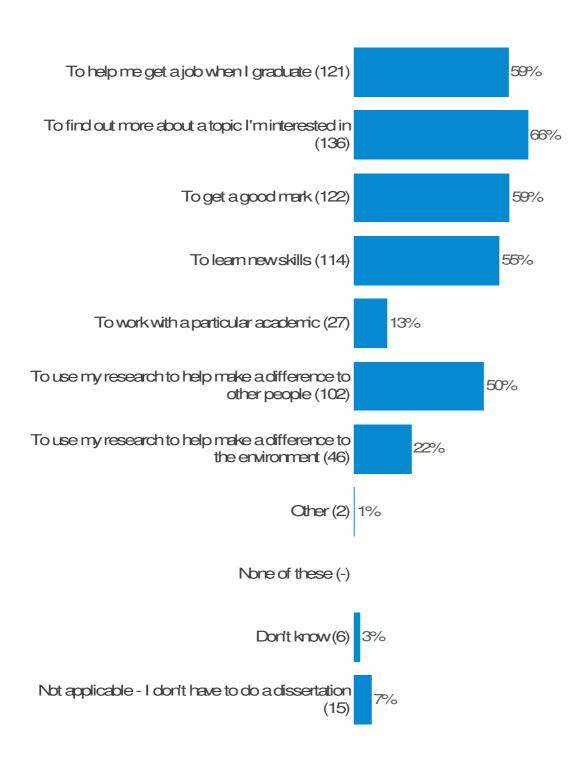

Thinking about the skills and knowledge covered in this survey, please select one answer for each option

(Link coursework or dissertations to the issues)

If your course includes completing a dissertation, what do you hope to get out of completing your dissertation?

Please select all that apply

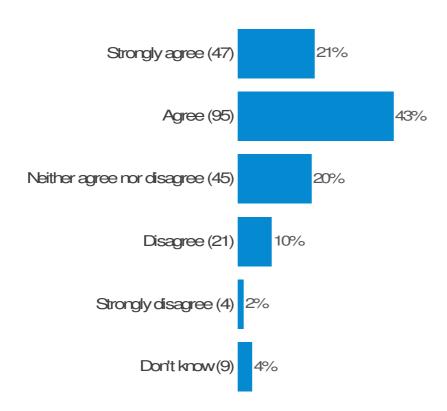

If other, please specify

To become published Have it published

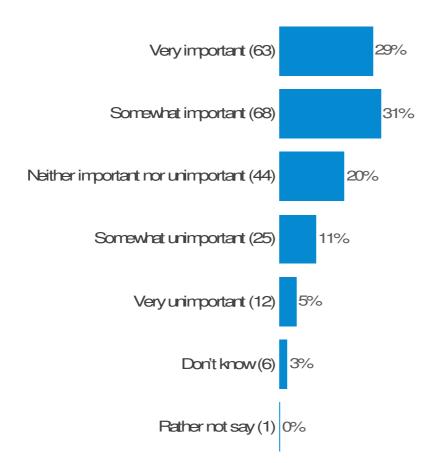

To what extent do you agree or disagree with the following statement about the place where you currently study:

"I am able to contribute to the development of the curriculum for my course."

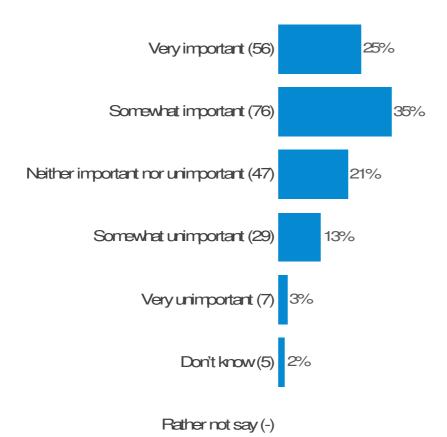

Please select one only ()

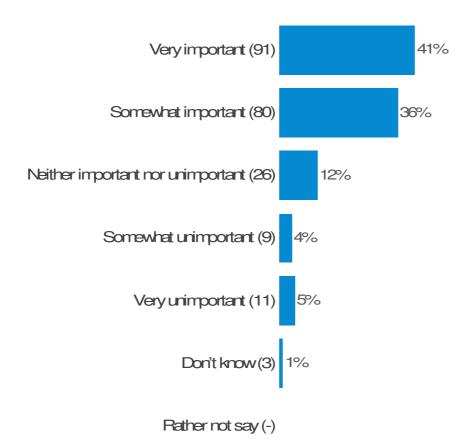

How important do you think the following skills and knowledge are to your future employers? *Please select one for each option* (Understanding how human activity is affecting nature)

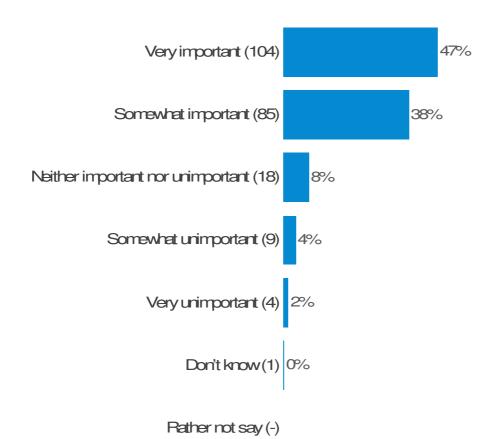

How important do you think the following skills and knowledge are to your future employers? Please select one for each option (The causes of inequality in the world)

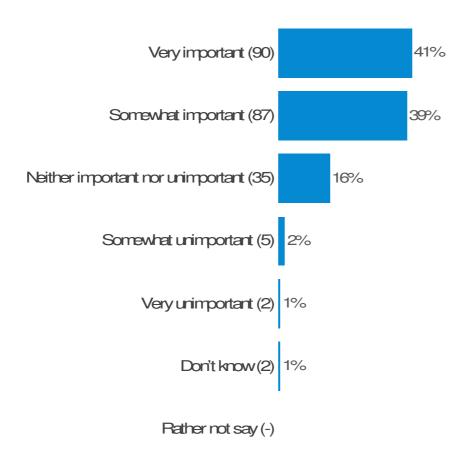

(Using resources efficiently to limit the impact on the environment and other people)

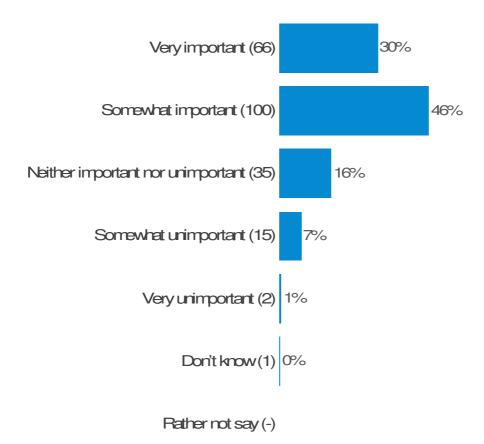

How important do you think the following skills and knowledge are to your future employers? Please select one for each option (Considering ethical issues linked to your subject)

We'd like to know what your plans are for after you finish your course.

What kind of organisation do you see yourself working in when you have completed your current course?

Please pick one only

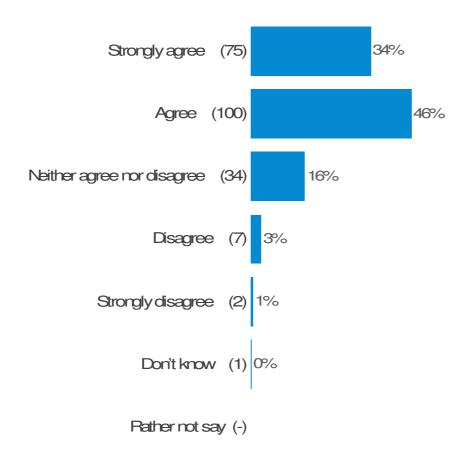

Please tell us what type of organisation you see yourself working in.

Fashion
Computing/software engineering
filmmaking
Coding and creation
Military
psychology
architects office
property
design
Politics - Public Sector/Translation/Intelligence
Research, PHD perhaps

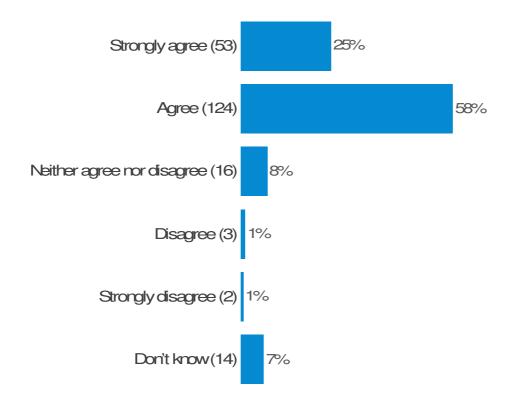

To what extent, if at all, do you agree that universities / colleges should be obliged to develop student's social and environmental skills as part of their courses?

Select one only

To what extent do you agree or disagree with the following statements? Please select one only for each statement

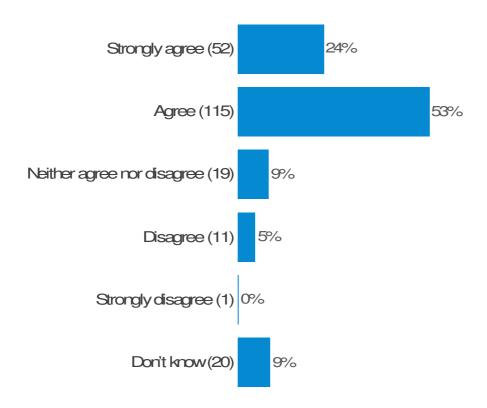

(My university / college takes action to limit the negative impact it has on the environment and society)

To what extent do you agree or disagree with the following statements?

Please select one only for each statement

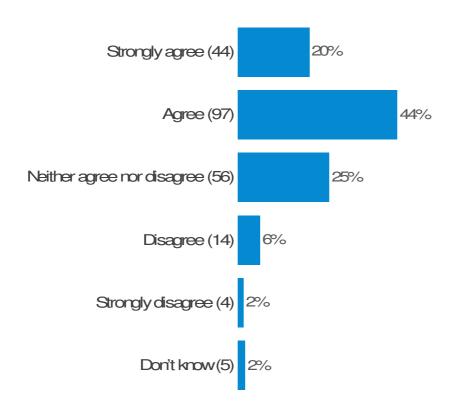

(My students' union takes action to limit the negative impact it has on the environment and society)

To what extent do you agree or disagree with the following statements?

Please select one only for each statement

(Being a student at my university / college encourages me to think and act to help the environment, and other people)

What do you understand the term 'sustainable development' to mean? *Please write your answer into the box below*

Such as recycling, using materials that are sustainable (re-usable) clean and don't impact anything negatively.

to be able to develop something by using sustainable techniques that limit the affect on the environment and can be used for many years without running out of the materials needed.

Methods that can sustain us without harming the environment

Improving society and the lifestyles of people in it without negative impact for future generations

Development that meets the needs of the present without compromising the ability of future generations to meet their own needs

To be able to think about tomorrow, knowing that the plans you that are in the process do not have a negative effect on tomorrow.

Limited impact on environment

To make sure short term decisions have a positive benefit for the future

Being able to depend on itself As it develops

Enough supplies are provided for the growth of something without affecting others.

building things that will last a long time, that are also forward thinking as to what the future might need.

Development that can be continued in the long terme e.g. does not use all funds and resources that cannot be replenished within a reasonable time frame

Ensuring that we can provide the best we can for our generation without negativity impacting on future generations.

What do you understand the term 'sustainable development' to mean? *Please write your answer into the box below*

Development that doesn't cause a negative effect on the environment and depletion of natural resources

economic development

improving economy, our self and others while limiting the effects it has on the environment/nature

Development that meets the needs of the present without affecting the needs of the future

Finding a way to live comfortable now without limiting the future generations environment

Developing a project to produce the least negative impact possible on the environment, sourcing renewable energy/materials and the longevity of the outcome.

A environment that meets the current needs

Not an end state and a mature way to create processes that will bring a social/natural/economic long term growth

developing something in a responsible, non-wasteful way towards the environment

Taking account of the impact (socially, environmentally, economically) your project or construction has and working to reduce these issues.

Going forward in a way that can be maintained and does not harm the environment

sustainable development means to build and create to meet the current needs of our economy without limiting the needs of future generations.

Development that doesn't deplete environmental resources. It could also be economically and socially sustainable.

A development that in no way compromises the environment in the foreseeable future, i.e a building constructed from renewable materials that will be in constant use without deteriorating whilst powered by a renewable source

development that does not have a negative impact there for can be sustained at no cost to environment/society/culture

Developing in a way that can continue for the future and is not just a short term solution

respect people and environment

Being able to use present resources, without compromising future ones.

to devleop in a way that does not exploit the environment/our resources

Looking after the planet for future generations while still developing for humans needs

developments that meet the needs of the present without compromising the opportunities of future generations

Development that doesn't affect natural resources

When the resources you use today doesn't compromise the future use of them.

That it works in harmony with the planet.

Development that won't affect future generations in a bad way

Long term positive Development

Development which meets the needs of the current generation without compromising the ability of future generations to meet their own needs.

Developing what we have using Resources that don't run out or harm the environment

Developing without depleting natural resources, by using alternative means of development.

A development that meets the needs of future generations as well as present, for example, not using resources for short-term gains at the expense of future, long-term needs

Renewable/recyclable sources and resources

What do you understand the term 'sustainable development' to mean? *Please write your answer into the box below*

a development that has a long lasting impact, that is beneficial and environmental friendly for the future.

Carbon footprint

the long lasting guaranteed, creation.

I'm not sure

Producing something that will not negatively use current materials and resources that will effect the use of the same materials or the wellbeing of the future generations

Using resources that are sustainable, without any adverse affects to develop our world

developing society for a better

Development that meets the needs of the current population but does not exhaust the world's resources.

It is development in the environment without the use of natural resources

To develop that can continue; without badly impacting the environment, society or the economy.

To ensure that future developments to society, whether that be environmental or policies are be continued and maintained for lasting periods of time

development or change that will last

It is the development of the society as a whole, without contributing to more adverse effects that the environment, or resources, is currently facing

It is realizing that all things come from somewhere and will have to be disposed of. It is incorporating this into the development plan and trying to minimize both impact on people and nature.

Growth in an area that does not put excess strain on the environment or surroundings (socially) or balances this strain out

economic growth that recognises the limited capacity of the natural environment to supply resources and absorb pollution.

Sustainable development is meeting the needs of this generation without comprimising the needs of the future

When things develop in a way that either helps the environment or doesnt change the current environmental situation

Something that is built and developed for the long term. Something to bring positive changes to the environment and social culture, as well as politics, within the foreseeable future.

Development for the future that does not drain natural resources

sustainable development is development which takes place over a long course to maintain human resources.

Progress without sacrificing the future

Think about long term effects. Build for the future and protect the environment

Present Realist developments that have no negative impact on the future

Development that does not have a negative effect on environment or society

Developing societies and humans as species and not destroying the planet and environment at the same time. We probably have to reform capitalism to make that happen tho.

Development that is economically and environmentally manageable. No long term effect to future generations.

Keeping use of unwanted resources and using them effectively

Change for the good

Economic development that doesn't have a negative impact on natural rescources

What do you understand the term 'sustainable development' to mean? *Please write your answer into the box below*

Being able to innovate and develop in a sustainable fashion to prolong the environment and reduce your carbon footprint

n/a

Developing sustainably - when building it is important to know how we can make it sustainable. Whether business, social or environmental

Sustainable development is development that meets the needs of the present, without compromising the ability of future generations to meet their own needs

Does what it says on the tin. Literally is creating a model, of whatever the subject matter being, where development within that area is sustainable for future years.

Progressing the human race to a state where we are living within our current and future means (I'm studying sustainable development, so hopefully I've got this right! ??)

Taking into consideration both the short and long term affects of our actions on our environment.

Sustainable development is creating change and progression that can be maintained at the new standard. It often links to the resources/energy used that is renewable and therefore will always be accessible to maintain the new standard.

A way of development that ensures that all resources used are preserved

Monitored development of society to ensure no damage to the environment or lives of its people occurs.

Development which impacts the long term future to a large extent

Development that can also help future generations.

Using resources that will not run out?

Creating growth and longer term change that positively impacts society whilst minimising the negative effect or positively effecting the natural environment so that we can continue to access resources over a longer period of time with as small an impact as possible.

Constantly improving myself through the skills and knowledge i gain

To build and create to ensure that the impact of today isn't affecting the opportunities and chances for those tomorrow.

Human progression that limits the negative economic, social and environmental prospects for the future.

to not take away from a system but to sustain if not build to it.

Meeting needs of current population whilst considering needs of future population

Creating something that can be reused plenty of times without the need to create additional resources which can influence negative impacts.

Getting better without using an excess amount of resources.

Considering the impact the developments have on the environment

development to the needs without affecting the future

In the long run.

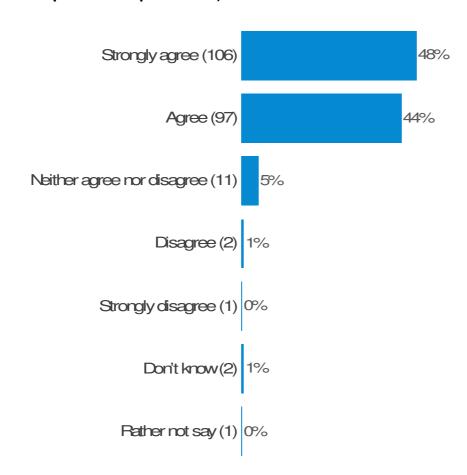

I have no idea.

Environmental concerns at the forefront of plans and actions

"Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs"

To what extent, if at all, would you say that you personally agree with the following statements: *Please select one for each statement*

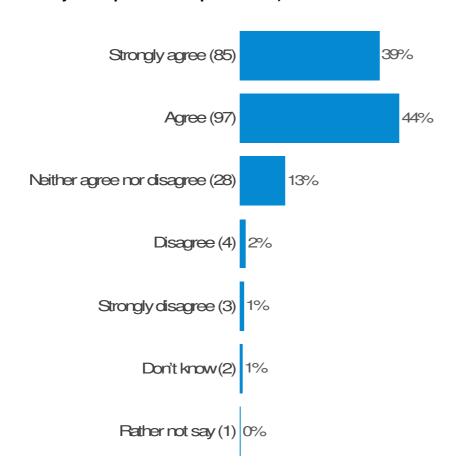

(Sustainable development is something which universities / colleges should actively incorporate and promote)

"Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs"

To what extent, if at all, would you say that you personally agree with the following statements: *Please select one for each statement*

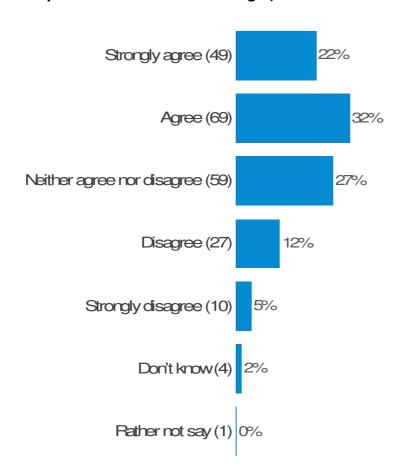

(Sustainable development is something which all university / college courses should actively incorporate and promote)

"Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs"

To what extent, if at all, would you say that you personally agree with the following statements: *Please select one for each statement*

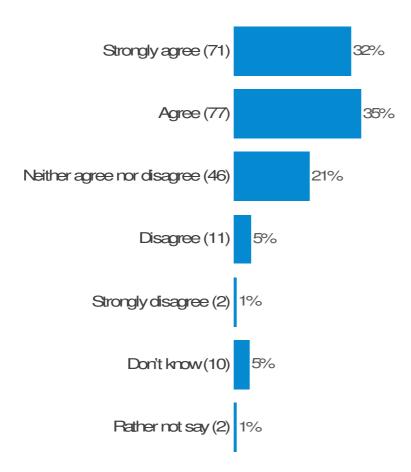

(Sustainable development is something all course tutors should be required to incorporate within their teaching)

"Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs"

To what extent, if at all, would you say that you personally agree with the following statements: **Please select one for each statement**

(Sustainable development is something which I would like to learn more about)

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

Please write your answer in the box below

It will impact me in the future so it is best to be prepared.

It will help shape largely my desire to bring about good leadership in the public health sector.

To understand my long term choices in relation to it.

I believe in my area of interest, it would be very important as any position in my field will have financial constraints imparted on them.

id like to learn so that i am better informed and can choose to act on the knowledge i have.

i would like to help my society be more responsible and give something back

Media and other organisations focus more on the problems rather than the possible solutions to them or paint one solution as the final one when there are alternatives. In order to achieve sustainable development people need to know what it is, what our options are, and then to have a discussion on the best way forward.

As knowledge is power and I would like to help make a change

Please write your answer in the box below

as i do not know much about it and feel it is something i should know about

I think I don't know enough about it and maybe that's why I don't care so much for it as I probably should

In whatever i may be doing in my life I will always want to think about how my current actions may impact future individuals.

Because I want to know if it is actually possible to stop men from wrecking the planet or if everything is doomed.

I feel uninformed on the issue.

Because doing everything while planning to do it for the long run is more beneficial that the short run.

Its important to know how to help the world.

Because it is the only way the world will proceed without further damage to the world

Because my answer was a bit different from the one you gave me in the next question. I never heared of a definition of sustainable developement and would deffenetly want to get some more information on that how it works and a bit about it's importance

Learn more relevant skills not just to career but also in life.

How it is relevant to nursing

I would like to be better informed on how I can alter and shape my lifestyle to be more sustainable. Although I am fairly informed already, I feel many are not aware and it is therefore something I would love to be taught through universities to ensure people are made aware of their environmental impact.

I believe the way most companies work at the moment they are very short sighted and will plow on until there is no way they can continue to grow whilst damaging anything in the process

Because it's imprtant for the future

So that I can make informed choices that support rather than harm the environment. So that I can inform others. Because it is vitally important and everyone should know more!

I have to for my degree

I feel it is an important subject to learn about in order to understand and look after our planet

As it is important to protect the environment

To have a better impact on the planet.

Because it is something that I had limited education on when in school so would like to do more when teaching in the future

to help the world

It is important to consider using alternatives in future job roles, how to improve the society we live in and improve the future for the next generation

Its a modern day issue that consistently comes up during debates

It is important to care for our environment and natural resources

Personally I find sustainable development very interesting and it will be involved in my future chosen career.

It's a huge subject and is something I will learn about more in my course

because I think it is important subject of the future

because i will be working within property hopefully

How can I make a change? And bring that change into the future.

i would like to know how i can make a difference, if i understand it i may find it easier to incorporate it into my lifestyle

Please write your answer in the box below

So that I am able to progress into my field without damaging the environment I live in.

What I can do

as it would be very beneficial to learn more about it for my course.

I am a geography graduate so it's a topic I am interested in

Because I care about the future

Because it will be good for my personal development

I don't think I have learnt much about this in my previous years of education, and I think it is a vital part of today's society to learn about.

It is something I don't know a lot about so would like to learn more

I am doing a product design course and I want to incorporate sustainable practices and materials in my designs.

Turbulent years, win-win situation, care for next generations, pure legacy, competitive advantage

I think it's important and our duty to teach young people about the importance of sustainable development for the future. As I studied Geography at A Level I know about it anyway but I think all students can benefit from learning about it.

I have dealt with carbon reduction in my projects previously, but it is a rapidly evolving field so i would like to keep up to date with latest developments.

It's an important area and something many people think about

In relation to Events as my course is Events Management.

As an aerospace engineer, I believe that it is important for future aircraft to be designed and manufactured to a much higher sustainability specification than they are currently in order to reduce the harmful effects on the environment (e.g. the volume of pollution), however a lot of research is required in order to do this.

Because it seems an important part of being able to continue life in a better way

Technology may be an important factor to the way sustainability is handled in the future.

it is important to learn about it

renewable energy

Learn about ways in which we can think about a long term plan and how we can teach younger generations to care more.

I only have a basic understanding of this topic and would like to be able to know about it in at least a little more depth.

I want us to work better.

I think it's important to go about things in a way in which we can continue to do so in the future and live within our means.

How can we incorporare sustainable development in healthcare when a lot of equipment can only be used once and then is thrown away

So I can make a difference, if my employer does not do it now, then maybe I can make the change to implement sustainable development for the future.

To enhance my learning and to learn how our actions make an impact across the globe.

Expand knowledge

to help ensure the future doesn't fall apart

It's something all young people should discuss

Please write your answer in the box below

Its a hot topic for the future and it works well to incorporate into my course and any future job i may have

I am interested in the use of sustainable resources, once invested in, most, like tidal energy are free to obtain. This is much cheaper for the country than paying others to obtain fossil fuels that are damaging the planet

what projects are going to be done in order to raise awareness about sustainable development

Because it is going to make a difference to the future.

Because I care about the environment and believe our generation destroying much of it

I feel that sustainable development will help improve the Social Services sector by increasing its methods of working with the public whilst incorporating the even decreasing public funding

it will improve our future

It is a pressing issue for this generation. Climate change is inevitable at this point, so it is important to ensure that it stays within a limit which both humans and nature can cope with.

already active trying to build support for it.

During GCSE I had studied Geography and during that time learning about sustainable development was very interesting, however after that I had not managed to learn any further on the topic

To bring about a positive change in the future, in order to be able to help create a better life for the next generation.

its important to lean more about sustainable development so we have more knowledge and can be part of the changes which occur all around us.

The survival of future generations is somewhat important to the human race

How it is put into practise and the research around it

How can I, for example, put pressure on companies that destroy the planet? And why is palm oil in everything in the UK?!

To find out how I can contribute.

For future endeavours in my future career.

protecting nature and the environment is a top priority for me

How to get involved in projects and knowing and understanding how to sustain a venture

I would like to learn more about Financing for development.

It's what I'm studying!

How i can personally play a part in ensuring sustainable development.

Because in order to achieve that goal, people need to learn what it is, and through that how to achieve it.

Because it is a very relevant subject to our world today and I find it to be a very interesting topic to study.

Sustainable development has an impact in all parts of life. Whether that's in building, medication production, reducing waste or becoming more efficient with what we have, everyone has a part to play and can help in small ways

So I can apply these skills to myself and improve my abilities in the best way possible

It is a key part of my human geography course.

As I have not come across this term before

important for our generation and those to come

Please write your answer in the box below

It can encourage generations to take sustainable development seriously, while educating and ensuring that future generations are in a position where they will have not to worry about sustainable development as it would become second nature to them.

Competitive edge.

Ways to promote sustainable development in our everyday life to inculcate this in the future generations

how are we going to achieve the goal? how are we going to enforce others to do the same? People generally prefer taking the easier way out then do something extra to help as it waste time or they say they don't have time.

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

Please write your answer in the box below

NO

As little waste as possible, recycling, food waste, sustainable energy - solar panels, turbines etc.

Zero waste canteens?

More designated smoking areas so that impact is less

Having elective courses to which forms part of course works completing a module

no

Unfortunately I do not.

Set challenges for students that incorporate themes related to SD, e.g which group can come up with a practical idea that can be developed on campus.

every class should have a compulsory activity about sustainable development

More of a council thing but more recycling options, I'm throwing more stuff in the bin in Bristol then I used to in Northampton because we were able to recycle more stuff in Northampton when compared to here.

Dim

a society about it

no

to reduce paper use

More active promoting of the sustainable development activities as an Integral part of UWE and being a student at UWE.

Not really.

None

N/A

Talks in uni to spread awareness.

The way the University conducts itself at the moment, is beyond expectation

I would like to see, but need a little bit more educaton on understanding what sustainable developement actually means

My university has been doing a great job. If I'm to suggest, I would suggest my university to continuously involve more and more relevant activities that is regarding to our studies and career wise.

no

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

Please write your answer in the box below

eclectic buses. less field trips oversees and more in the UK.

no

Eco friendly buildings

Run more events, ensure buildings are sustainably run

I would like it to ban all single use plastics from being used within departments and outlets. I would like it to ensure that all courses have sustainability content.

UWE has great sustainability

I think it does it pretty well but there should be more communication to students about it.

More information built into courses and fun and engaging events to get students interested

no

raising awareness through campus events

recycling

#NAME?

No

I can suggest it but I don't think it will change much

Include a bit on intranet about what they are doing with regards to this

no

Eye catching posters and fun short meetings to try and get people to come.

My university does promote sustainable development however it could be incorporated into some courses that can relate to it eg sciences, law, social sciences and politics etc.

More chances to get involved in learning about this topic.

no

More local procurement and less food waste from corporate events. Use crockery instead of throwaway cups at conferences.

Promote it in lectures

Not really.

n/a

No

Incorporate this topic into already taught topics within courses. Promote it within university events. Make a bigger deal about it!

instead of telling us how to do it...the university should show us/demonstrate how to implement it

Just to promote it in the student union

Not sure

More social and economic initiatives to teach majority of students. Advertise better workshop and services that being offered. Easier accessible..

UWE are already good at encouraging sustainability

Widen the parking restriction zone and reduce the amount of printouts

It's too early on in the course to make an informed suggestion, however sustainable development should be encouraged to be included in any research based assignments (where appropriate).

More visible recycling points, more opportunities to recycle items such as printer cartridges, batteries etc. Less use of plastics. More promotion of sustainable goods and the impact of alternatives.

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

Please write your answer in the box below

educate students more

get more students involved in community gardens and environment etc

Workshop afternoon in groups and how to mindmap different ideas using minimum resources

Nope, they seem to be doing a pretty good job of it already.

Lectures for education Examples of how the uni is currently focusing on sustainable development and how we can get involved

More distance learning courses. These could cut the emissions of students commuting to university/college, and for tutors/academics having to travel more frequently for live lectures.

Only if it relates to the course

Creating awareness by having events, sending emails and having briefing sessions etc

No

direct that term to food

No

Using some of the departments of the university to assist in developing sustainable energy technology, which isn't an eyesore on the UK's landscape

no

no

Advertise and promote its sustainable achievements to students and the public.

Incorporate more theory and knowledge that can directly be transpired into practice

weekly workshops or lectures for all years to attend (like a big event) that we can go to and learn about it

Incorporate it into learning, as well as into the general ethos of the university.

less plastic and packaging waste

I think my university already takes quite a few steps in promoting and engaging in sustainable development

Organising field trips and presentation talks to give students more information about Sustainable Development.

N/A

open a society, hold meetings etc introduce into course

Promote vegetarianism or eating less meat

Speak about it more!

LED lights throughout

n/a

Green peace day and plant a tree day

No.

N/A

Reduce landfill waste by barring campus coffee shops from using non-recyclable coffee cups. Offer a discount/incentive to those who bring their own reusable coffee flasks/take out cups. Ban using non-recyclable polystyrene in any campus based cafe/food hall, use recyclable alternatives instead eg. cardboard, recyclable plastic. Place water dispensers around the university to encourage students to bring in a refill their own water bottles rather than buying bottled water.

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

Please write your answer in the box below

Improve it's environmental policies; i.e. not having the campus lighting/heating on excessively/installing sufficient renewable energy sources to support a significant part of its usage.

More incorporation into lectures and more events around uni to highlight its importance.

How to teach children about it all

Have more student led project based assignments built into the course

None.

Promoting green energy use

to incorporate it into learning

No.

Compulsory fun activities linked to that which at the same way make the students realise the importance of promoting sustainable development

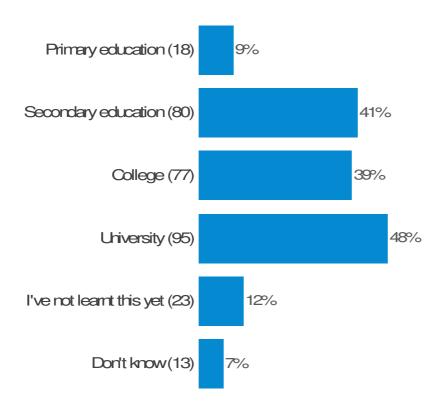

extra curricular courses or society as not everyone is interested

I dont know unfortunately.

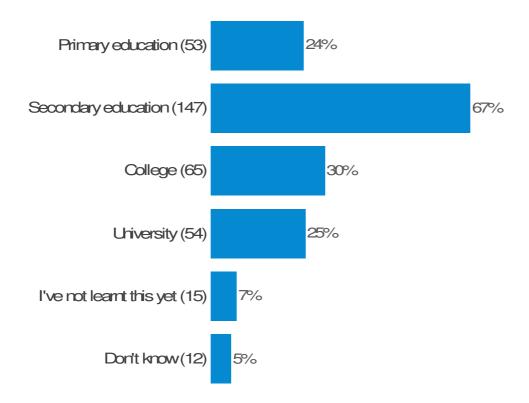

Stop wasting money on limited scope initiatives just to look good in survey results. More contact time

Thinking of your time in education so far, which of the following issues been covered in the teaching and where were you studying when this happened?

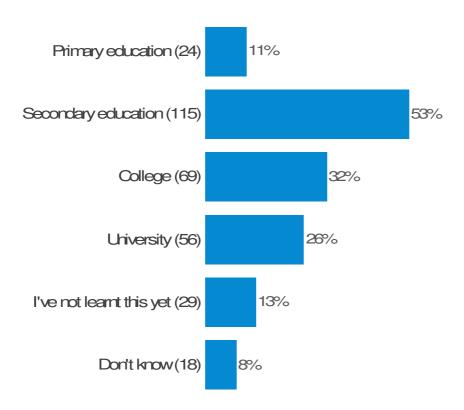

Please select all that apply (Biological diversity and nature)

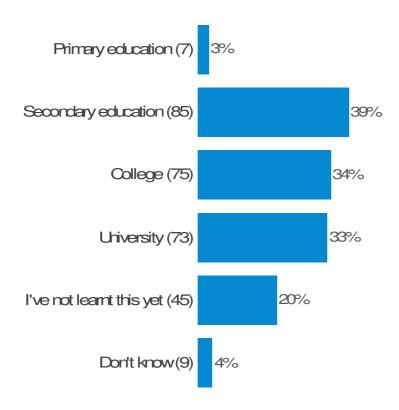

Please select all that apply (Citizenship and democracy)

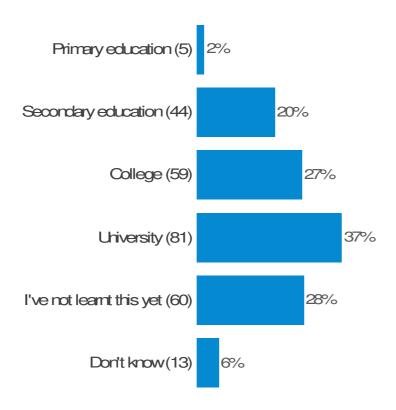

Please select all that apply

(Consumerism, global and ethical trade)

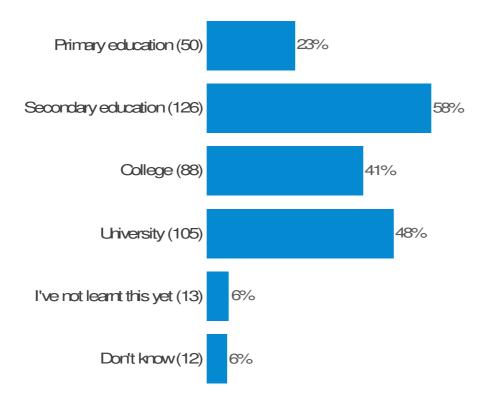

Please select all that apply

(Corporate social responsibility / business ethics)

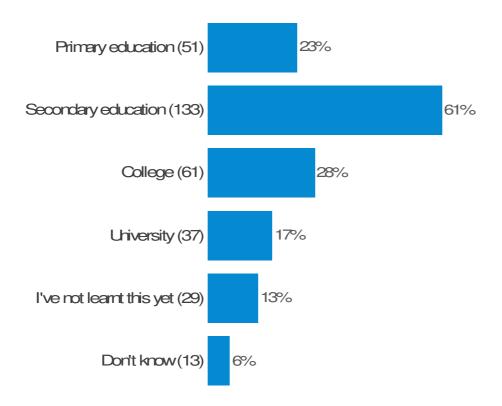

Please select all that apply (Cultural diversity and equality)

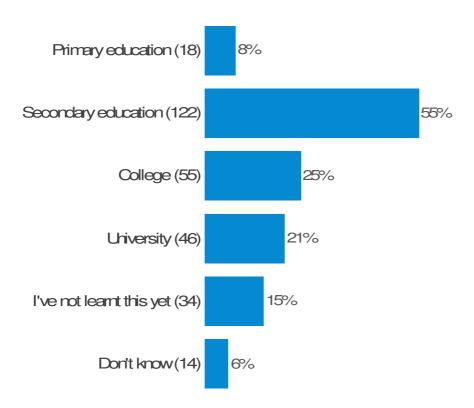

Please select all that apply

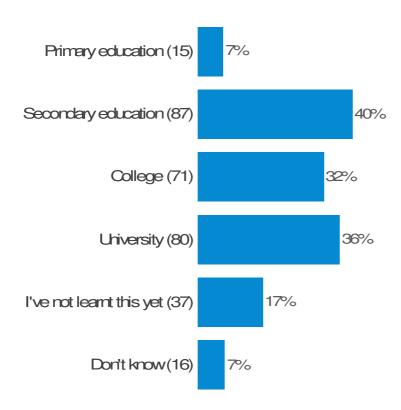

(Ecosystems and ecological principles)

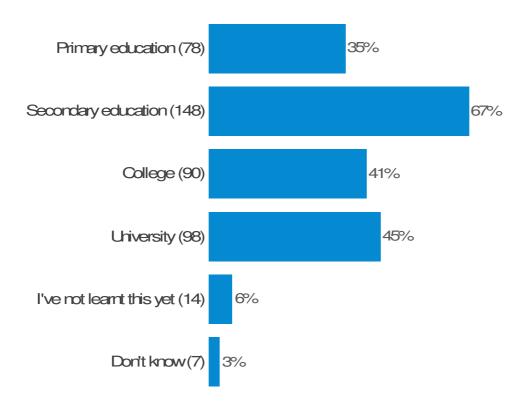

Please select all that apply (Rural and urban development)

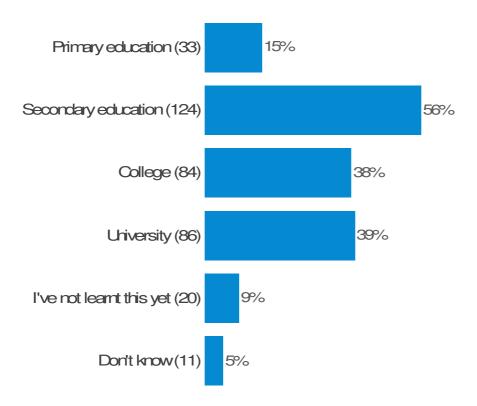

Please select all that apply (Social justice)

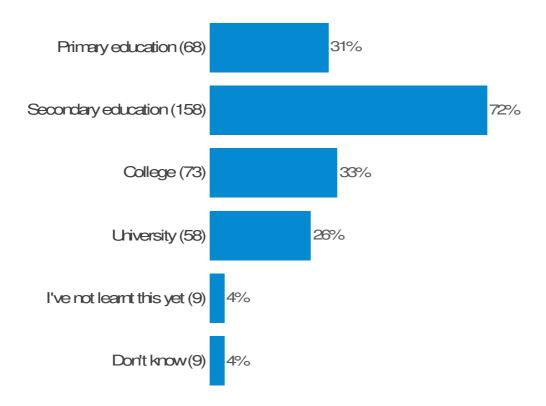

Please select all that apply (Health and wellbeing)

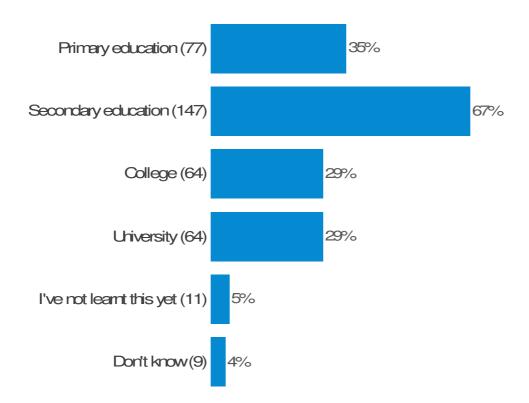

Please select all that apply (Human rights)

Please select all that apply (Climate change)

Please select all that apply (Waste, water, energy)

What impact, if any, has learning about any of the issues in the previous question had on you personally?

Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career

It's made my outlook and perspective broader when approaching situations - short and long term. Whether for me personally or what impact my decisions are having on others on a micro or macro scale.

I believe that my beliefs and values were already aligned with my learning. If anything it has only strengthened them and made me more aware of issues which previously I had not thought about.

Learning about how simple it is to recycle and why it is needed has led me to think about what i throw away, how it could effect ecosystems if i dropped litter or put everything in general waste.

well being is an important subject i would like to know more, and I think will really help people to help them realize about the problems and actions to take.

Very little. Most issues were briefly taught in Secondary School but not in much detail and with no passion from the teachers. College taught me a little more but mainly about different groups of people's views on these things and with very little emphasis on how these ideas are/can be applied by ourselves.

Rwy'n cofio popeth a ddywedodd fy athrawon am newid hinsawdd a peryglon gwastraff ac yn poeni amdanynt pryd mae'n rhaid i mi gwagio biniau. Rwy'n ymdrechu o hyd i beidio bod yn rhan o diwylliant hiliol, rhiwiaethol pan yn trafod pryderon pobl.

It was part of my core studies and made me realise that by doing little things we can help and make a difference

feel like i am more aware that these issues are very real and relevant to everyone

Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career

I think I was taught about about energy in high school and was too young to appriacte it

It had made me excessively anxious.

Interesting topics

It certainly reduces any free time I might have daily, but it also widens my view towards the knowledge I may yet to discover

Made me change the way i behave towards the environment.

It has helped me develop my out view, on any project or task I now undertake.

I realized that new information that I catch during the day I can fit it into my daly basis. Some of the new facts brings me knowledge to life that I can use and advice others

Not sure

Learning may affect my lifestyle when its time for me to balance my time. It's a challenge for my time management skills when it come to study life, social life, and work life. However, these changes positively affect y future career when It comes to managing skills, communication skills and adaption skills. I'm sure I can manage my work well in the future because of my 'training' in my university life.

A better understanding of the people i work with

I currently study Environmental science with the aim to go into renewable energy or into better effective agricultural methods. I am also weary of my impact on the environment and have taken to a vg/ve diet and do not drive. Becoming educated on such matters has meant that I take a personal stance and think more about my personal impact on the environment.

none

Not a massive change, but I will waste very little water if I can.

Na

Human rights is a career area I aim to go into after finishing university

Learning about environmental damage at secondary school made me aware of issues and inspired me to want to contribute towards caring for the environment and to think about my individual impact. Learning outside of academic institutions has inspired me to make changes in my own life and responsible choices as a consumer. All my learning has made me strongly value our planet and all it's inhabitants and want to protect it, especially for future generations.

Learning about climate change made me enter my current course

Made me think more about where stuff comes from food etc.

I don't think it has affected me much at all.

It has made me more aware of how my actions affect the environment and world around me

its makes me more aware about the things around me

Try to save energy to prevent climate change

none

Ethics: As a paramedic there will be numerous ethical issues to put into consideration when on the job, to provide the correct care to any patient despite their background and in regards to interpersonal skills.

These issues have always been a key part of the way I think due to both my families views and therefore my teaching. I have been brought up as a kind and respecting person who cares about all, and treats all equally; with educated political and economic views of the world. However without this teaching and upbringing I do not believe I would be as kind, caring or sympathetic to most people nor care about the treatment of those I do not directly come into contact with.

Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career

I think I am a better person because of it and I am more aware about my environment.

made me recycle more

We only use renewable energy sources for our home electricity and gas

Not sure as havnt had time to think about it.

It has taught me everything, it hasnt given me many aims in terms of a career but its given a rough idea of what i want to learn about, and things i would look into in my own free time as well as things id like to learn about in class

Knowing about things like this from a young age meant that I was aware of the impacts as a child so I didn't develop damaging habits and views that would hinder my development as an adult.

it had a big impact as I now take these into account when it comes to my assignments

I'm constantly thinking about where my food and other purchases are produced. I aim to only spend my money at companies that demonstrate environmental efforts and corporate social responsibility.

Has made me think about people other than myself

Made me think a lot of my own actions and has helped me to act more responsibly.

Very little

Without learning about some of these I don't think I would have such a strong want to help and teach others within my desired career.

It has made me think about my actions such as health and wellbeing. I've been looking after myself more than I used to.

It helped me to understand how to deal with real life situations, especially during my placement. For my future career, it will help me to adapt better as I am knowledgeable about the environment, human rights and many more.

It has made me aware of different factors that affect the world and people and I have taken it upon myself to actively be aware of these and change it where and when I can

Helped me realise that I would like to be in a position or job that can help people in some way at the end of my degree

Self development, sustainable mindset, weighing ethics maturely, care and fight for equalities and care about environmental damage.

Has me more aware of the issues around me

Most of the issues dealt with in secondary school didnt affect me too much, as it was not in depth. I think the biggest impact has been mostly isses realting to nature, and not humans, for which i feel we have more responiblity to nature, animals and the earth than other humans. In my current career, I now aim to learn about more carbon reduction and ecological issues than social issues.

CSR has had an impact on my future career in deciding to go for a company that is ethically and socially responsible.

Discussion of these issues enables students to become aware of them, however quite often it seems that people are not overly bothered if they can not see it happening directly in front of them. Learning of these issues made me question topics and choices more.

Having a greater awareness of social issues and how these impact on the everyday lives of people, social/occupational injustice, deprivation and apatite. How my future practice can affect local communities and how this can impact on national issues.

It has made me think about things more, become more open-minded

There needs to be change diversely

Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career

realise the importance of personally dealing with climate change, acting by yourself

Ever since I have been more aware about the waist I make, how can I recycle it and what impact it makes.

In particular with water, I am a lot more careful when it comes to wasting water as I studied geography and understand this in a lot more depth.

Having learnt of climate change and the effect we have on it's increasing intensity, I have tried to be more careful with how much energy and water I use. Plus I try to recycle when I can.

I am more aware of how my actions affect other people and the environment and as such have made some limited conscious efforts to act in a more sustainable way.

Feeling a stronger responsibility for the effect I have in this earth.

It has made me stop and think about the consequences of my actions on a larger scale before continuing, and either stop that action or modify/change it.

Made me think before doing certain things.

...

Not sure

It has made me aware of my own carbon footprint, how I can control my use of energy and reduce waste

N/A

To take responsibility for one's actions

Being able to see and understand the various ethical diversities and their requirements within society, these being met or not being met leads to issues of human rights and equality. Vital for my role as a social worker

It's made me be more open minded and aware

I aim to use as little product and electricity/gas as much as I can in a day. Heat the house less, turn lights off, etc. I use public transportation. I have left a job before as they didn't care to make similar changes or reduce the waste sent from their construction sites. I would be seeking out a future which would have these things at their core. Helping others and the environment towards a better sustainable future.

I am politically active as a result of this learning

Although I may not always act on it, things that I have learnt, especially during primary school, have always been in my subconcious. For example, when filling up the kettle, I only pour the amount of water that I need in order to save energy

Learning about different cultures and ecosystems have made me see the world as a bigger place. It has taught me that everything in the world matters and to prevent damaging the world we call home.

learning gives us something to do throughout the day, even if it is just watching a short youtube clip. it allows us to value our lives a bit more as we learn how science works and it makes us more ambitious when it comes to pursue our future careers just knowing little facts, it makes us a much more interesting person as a whole

I am more conscientous of wasting resources

You become more aware of impacts which changes the way you think and lifestyle. Also to incorporate your knowledge to do better things

Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career

Learning about these issues in my education didn't have any impact on me since it was mostly dry knowledge. What I know I know mostly from newspapers and internet. I also try to learn more and consider impact of my field (visual communication and printed media) on the environment. I think that my lifestyle choices that are a result of being somewhat concious of environmental matters are: vegetarianism, recycling even when I stay in places where I don't have to, wearing mostly second-hand clothes, not buying gifts during holiday season, not wasting food.

In university I think about how I could do my job more sustainably. Not Wasting water, turning off lights etc.

Learning is an important process that everyone naturally has to go through. Its the next stage of learning where you learn about how you can better yourself and become more intellectual to aid in getting a good job.

n/a

day to day I want to make a change as much as I can to make it a better world

Moral purpose.

None.

I've reduced my energy use at home, driven my car less and gone vegan. (Do I get a prize? seriously though, I have actually done all these things)

I am more aware of the impact of my personal actions and decisions on wider society and the environment. I would like to help balance out social inequalities whilst working in education and social care

My awareness and concern of such issues as social justice have led me to pursue a teaching career. As a teacher I can have an impact on children who need support and improve their future opportunities.

All that I've learned about those issues has helped me to understand how to be a useful member of a community and what skills I have that I can use to benefit myself and others.

I make effort to recycle take public transport. I always consider ethical implications and have volunteered abroad to help those less fortunate and try to tackle inequality

I feel I have developed a strong set of moral values that guide me in difficult situations but also in daily living to be responsible for my actions and help others where I can

The issue is covered early in your education but is constantly reiterated throughout your education career. Some companies don't value the idea as closely as others.

A bigger drive to make a difference.

It has encouraged me to think about other issues where many people seem to forget about. Actively encouraging education about certain areas such as diversity and basic human rights.

Think more about the impact I have on these issues.

Made me realise that each day counts to make a difference

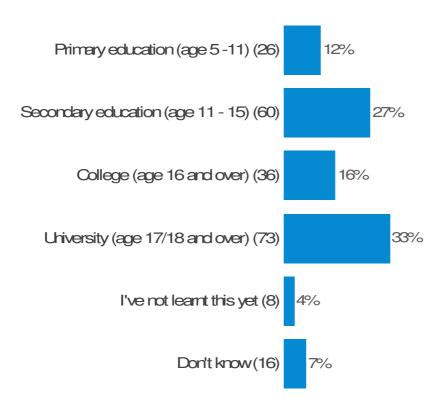

Hopefully once I learn more, I can choose companies in the future that has similar aims and values for the environment. There aren't a lot of companies in Asia like that as in European Countries.

It gave me a better understanding of whats going on around me.

None

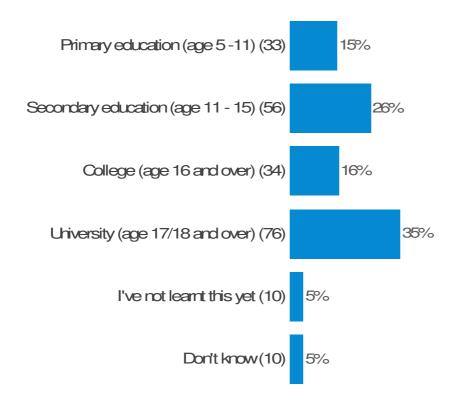

Still thinking about your experiences in education so far, what place where you have studied... *Please select one only*

(Acted to reduce it's negative impact on the environment and society the most?)

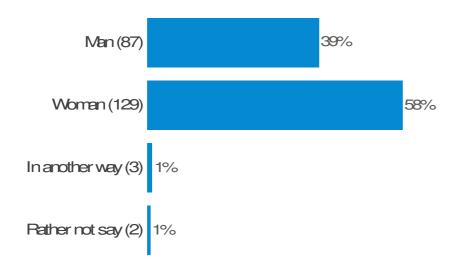

Still thinking about your experiences in education so far, what place where you have studied... *Please select one only*

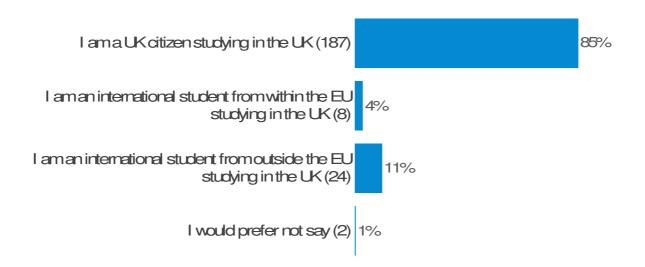

(Encouraged you to think and act to help the environment, and other people the most?)

Which of the following best describes how you think about yourself? *Please pick one*

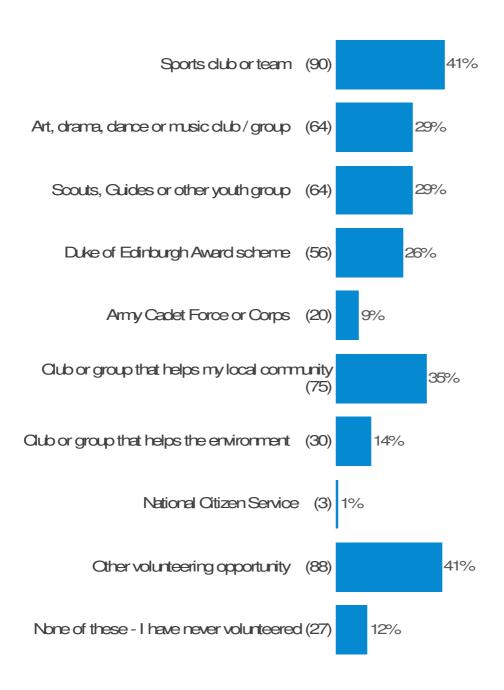

Which of the following statements best describes you? *Please pick one*

What other volunteering activities, if any, have you ever taken part in?

Please think only about volunteering you have completed outside of formal school, college or university hours Please select all that apply

If you live in the UK outside of term time, please let us know the first part of your home post code.

We will only use this information for this research and will never send you anything by post as a result of providing this information here.
